Profile Summary

Results-driven Java Full Stack Developer with 2+ years of experience building scalable web applications and Spring Boot microservices using Java 8/11/17, Angular, and PostgreSQL. Skilled in REST APIs, microservices architecture, OAuth2/JWT security, and CI/CD automation with Jenkins, Docker, and Kubernetes. Adept at Agile development, TDD, and delivering clean, high-performance code for enterprise-grade solutions, maintainable applications in cross-functional teams.

Experience

Software Engineer

Societe Generale GSC

Bangalore, KA

June 2023 – Present

- Restructured scalable microservices-based web applications using Java, Spring Boot, Angular, and PostgreSQL, improving system performance by 30% through REST API performance and seamless front-back integration.
- Implemented multithreaded processing for 8000+ daily PR files using custom thread pools, reducing file processing time from 12+ hours to under 30 minutes.
- Automated GDPR-compliant data retention and purge workflows by developing Data Record Management (DRM) microservices (NRR, ORR, Purging Report) deployed in SG's private cloud, eliminating manual interventions.
- Optimized front-end performance by implementing debounced server-side filtering, lazy loading, and pagination in Angular with RxJS, improving responsiveness and reducing API load.
- Redesigned CI/CD and deployment efficiency by automating Jenkins pipelines, optimizing Kubernetes resource allocation, and reducing deployment time by 50%.
- Strengthened application security with Role-Based Access Control (RBAC) and secure user provisioning, ensuring compliance with enterprise security standards.
- Mentored and trained junior developers, led technical ceremonies, enforced SonarQube-based code quality checks, and achieved 90% test coverage with JUnit and Mockito, reducing technical debt and improving team productivity.

Associate Software Engineer – Intern

Dosii

Pune, MH

May 2022 – July 2022

- Enhanced SaaS web application used by 700+ educational institutions, improving XML data processing speed by 12% through company pages, profile forms, and advanced dashboard filters.
- Improved search performance by 60% by implementing server-side caching and pagination in IaaS/PaaS environments, reducing load times and enhancing user experience.
- Directed multi-threaded backend services to handle high-volume data operations, ensuring 100% data integrity during platform transitions.
- Accelerated release cycles by deploying backend modules, troubleshooting production issues, and collaborating closely with cross-functional teams.
- Applied TDD and BDD methodologies using Cucumber, JUnit, and Mockito; gained hands-on experience with REST APIs, MongoDB, Gradle, Postman, Apache, and Linux environments.

Education

College Of Engineering, Pune

B.Tech. in Computer Engineering

Aug 2019 – May 2023

- **Coursework:** Data Structures and Algorithms(DSA), Computer Networks, Operating System, DBMS, OOPs, Computational Theory

Skills

Programming Languages: Java 8/11/17/21, JavaScript, TypeScript, Python, C, C++, SQL, Shell

Backend Development: Spring Boot, Spring Framework, Hibernate, JPA, RESTful APIs, Microservices Architecture, Multithreading, RabbitMQ

Frontend Development: Angular (v12-v18), ReactJS, HTML, CSS, Bootstrap, RxJS

Databases: PostgreSQL, MySQL, Oracle, NoSQL, Redis

Cloud & Infrastructure: AWS (Amazon S3), Microsoft Azure, Docker, Kubernetes (K8s)

DevOps & Automation Tools: Jenkins, Maven, NPM, Git, GitHub, Liquibase, CI/CD Pipelines

Testing Frameworks & Tools: JUnit, Mockito, Cucumber, JMeter, TDD, BDD, PlayWright

Core Technical Concepts: Object-Oriented Programming (OOP), Design Patterns, High-Level Design (HLD), Agile (Scrum, Kanban), Software Development Life Cycle (SDLC)

Projects

Syntra — Full-Stack E-Commerce Platform

github.com/shu3102/Syntra 

- Developed Syntra, a scalable e-commerce platform using Spring Boot and Agile methodologies, supporting 1,000+ concurrent users and integrating web services for seamless user experiences.
- Led the creation of a microservices architecture with Docker for containerization, Kubernetes for orchestration, and CI/CD pipelines, ensuring 99% adherence to SLAs and automating deployments.
- Designed REST APIs with TDD, 80% unit test coverage, and information security compliance, leveraging version control and automation tools to optimize troubleshooting and workflows.

HireIt — Web Development

github.com/shu3102/HireIt 

- Launched the HireIt Full-Stack Online Job Portal, facilitating seamless interaction between students, job seekers, and companies, resulting in a 16% reduction in placement processing time and an increase in successful job matches.
- Simplified backend using Python Flask and created a responsive UI with HTML, CSS, and Bootstrap, improving load time by 30% and user engagement by 20%. Applied problem-solving skills to optimize performance and response time.

HTTP Server — Computer Networks

github.com/shu3102/HTTP 

- Programmed GET, HEAD, POST, PUT, DELETE HTTP Request Methods, including all headers and status codes.
- Upgraded system reliability by implementing multithreading, logging, cookie management, and configuration file handling, resulting in a 15% reduction in error reports related to persistent and non-persistent connections.

Certifications

AZ-900 — Microsoft Certified: Azure Fundamentals

microsoft.com/az900 

Spring Boot 3, Spring 6 and Hibernate

udemy-certificate.com/spring 

Angular- The Complete Guide

udemy-certificate.com/angular 

React- The Complete Guide (incl. Next.js, Redux)

udemy-certificate.com/react 

Awards and Recognition

- **Finalist, Algowar** – *National Level Coding Competition*
- **2× Spot Awards** – *Ownership and Delivery Excellence*
- **Top Performer Award** – *Honored for exceeding performance expectations*
